# BUSINESS PROCESS MODELLING ASSIGNMENT

**Chosen Process:** Employee Onboarding

**Submission Date:** 15th July, 2026

**Name:** Shinjini Dasgupta

**Roll No:** FT273034

**Course:** PGPM

**Section:** 3

# Business Context

## Organization

XYZ Pvt. Ltd is a growing technology company that recruits employees all year round across multiple departments. The company is planning to implement an ERP system to automate its employee onboarding process and improve efficiency by ensuring coordination between Human resources, IT, Administration and Hiring managers.

## Process

The process begins when a candidate accepts the offer letter. It involves collecting and verifying joining documents, conducting background verification, obtaining Hiring manger's approval, creating the employee record, providing IT resources and administrative facilities, conducting employee induction and finally completing the onboarding process.

## Purpose

The purpose of this process is to ensure that every employee completes all required onboarding activities before their first working day. It standardizes onboarding activities, ensures compliance with company policies and provides a consistent onboarding experience.

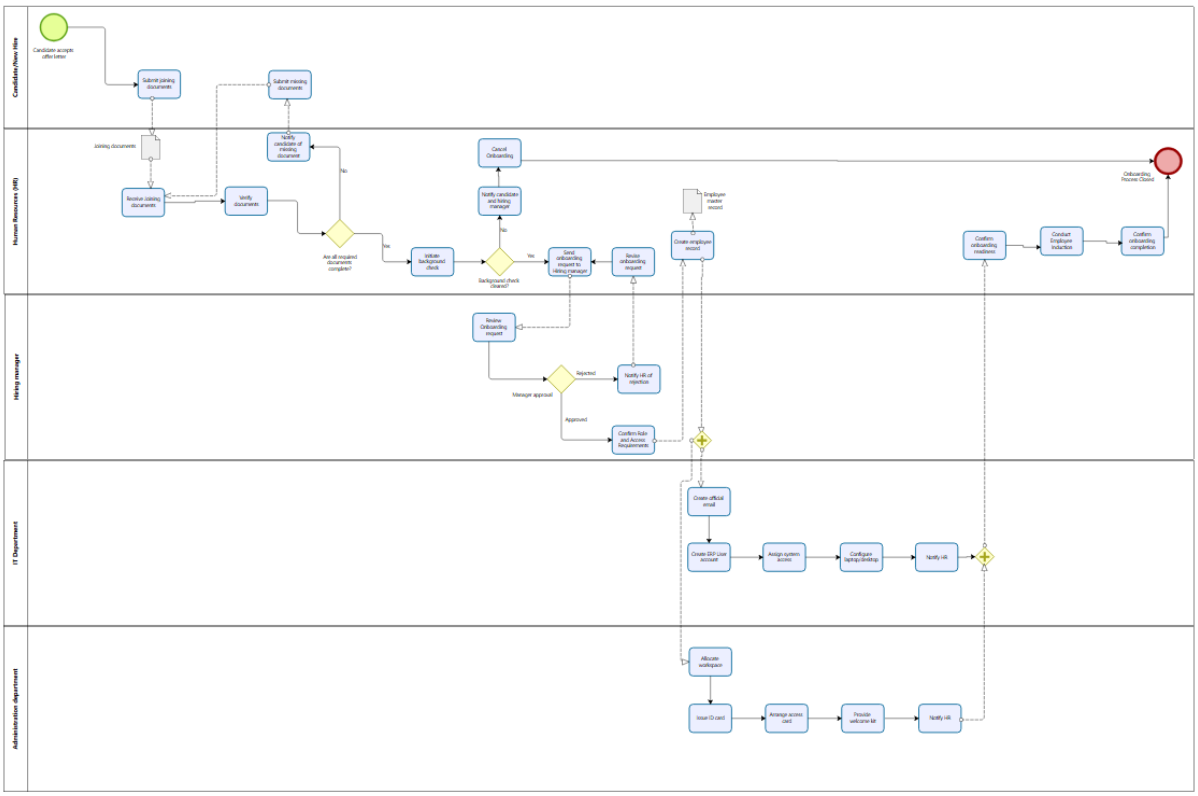

## Business Problem

Currently, the whole onboarding process is managed manually through emails and spreadsheets. This sometimes leads to errors and delays in document verification, lack of visibility, frequent follow-ups and lack of proper coordination with other departments like IT and Administration. Hence, an ERP system would standardize and automate the process, reduce manual effort and provide real-time tracking of onboarding process.

# Process Scope

| Item | Details |
|---|---|
| **Start Event** | Candidate accepts offer letter |
| **End Event** | Onboarding process closed |
| **Process trigger** | Candidate accepts the offer letter and submits joining documents |
| **Expected Output** | Employee is successfully onboarded with verified documents, completed IT and administrative setup and employee induction |
| **Primary stakeholder** | Human Resources (HR) department |
| **Supporting stakeholders** | Candidate/New Hire, Hiring manager, IT department, Administration department |

# Bizagi BPMN Diagram

## Business Rules

- Joining documents must be verified before background verification begins.
- If any mandatory joining document is missing, the candidate must submit the missing document before the onboarding process can continue.
- Only candidates who successfully clear the background verification process are eligible for onboarding.
- The Hiring manager must approve the onboarding request before the employee record can be created.
- If the Hiring Manager rejects the onboarding request, HR must revise and resubmit the request for approval.
- IT account creation and administrative workplace preparation must be completed before onboarding readiness is confirmed.
- The onboarding process is considered complete only after the employee induction has been completed and onboarding completion has been confirmed by HR.

# Process Improvement Suggestions

## 1. Automate document verification

Implement AI based document verification within the ERP system to automatically verify mandatory joining documents. This will reduce manual effort, minimize errors and reduce time for document verification.

## 2. Real-Time Onboarding Dashboard

Develop an ERP dashboard that would display the real-time status of every onboarding activity such as document verification, IT setup, approvals and so on. HR managers can monitor the pending tasks, identify bottlenecks and generate reports. This would improve process transparency and help in better decision making.

## 3. Automated Notifications and Reminders

Configure the ERP system to automatically send notifications and reminders to candidates and internal stakeholders whenever an action is pending. For example, submitting missing documents, approving onboarding requests and so on. This can reduce delays, improve communication and enhance process visibility.
